

# Neeha Agrawal

(734) 754-0430   neehaj12@gmail.com   LinkedIn   Portfolio   GitHub

## SUMMARY

Product-focused Data Analyst with experience designing KPI frameworks, building scalable SQL pipelines, running A/B experiments, and translating ambiguous business questions into structured analytical solutions. Proven ability to partner with cross-functional stakeholders to define metrics, surface growth opportunities, and deliver self-service dashboards teams rely on daily across Databricks, BigQuery, and Snowflake.

## EDUCATION

### Indiana University Bloomington

*Master of Science, Computer Science*

Aug 2024 – May 2026

*Bloomington, IN*

### Pandit Deendayal Energy University

*Bachelor of Technology, Computer Science*

Aug 2020 – May 2024

*Gujarat, India*

## TECHNICAL SKILLS

**Languages:** Python, SQL (Advanced), R

**Analytics:** A/B Testing, Experimental Design, Statistical Modeling, KPI Design, Cohort Analysis, Funnel Analysis

**Data Platforms:** Databricks, PySpark, BigQuery, Snowflake (familiar), PostgreSQL, MySQL, Redshift

**Orchestration:** Apache Airflow, ETL Pipelines, Data Validation, dbt (familiar)

**Visualization:** Power BI, Tableau, Looker, Streamlit, Excel (Advanced, Pivot Tables, VLOOKUP)

**Cloud:** AWS (S3, Lambda, Glue), Azure (AZ-900), Git

**AI Tools:** Claude Code, Cursor, LLM Workflows, n8n

## EXPERIENCE

### Indiana University Bloomington

*Associate Instructor – Software Engineering*

Aug 2025 – May 2026

*Bloomington, IN*

- Mentored **150+** students in system design, data modeling, and scalable architecture – guiding teams through translating product requirements into measurable success criteria and structured implementation plans.
- Designed rubric-based evaluation frameworks tied to system performance metrics – introduced structured feedback loops improving delivery quality across **20+** project teams per cycle.

### Skechers USA

*Data Science & Analytics Intern*

May 2025 – Aug 2025

*Manhattan Beach, CA*

- Designed and optimized SQL pipelines integrating **10+** enterprise data sources to support merchandising, pricing, and revenue analytics – built a unified reporting layer serving cross-functional teams.
- Partnered with merchandising and operations stakeholders to define KPIs including sell-through rate, inventory aging, and margin contribution – insights adopted for weekly planning decisions.
- Performed multi-terabyte reconciliation using PySpark, identifying upstream data inconsistencies and improving enterprise reporting accuracy to **99.8%**.
- Built self-service dashboards translating complex multi-source datasets into executive-facing product performance narratives – adopted by finance, merchandising, and ops within the first month.

### Nextun Technology Private Limited

*Software Developer*

May 2023 – Jul 2024

*Ahmedabad, India*

- Built internal analytics dashboards tracking engagement, revenue, and operational efficiency metrics – used by leadership for weekly product and business decisions.
- Designed relational schemas and optimized SQL queries reducing query latency by **35%** and automated ETL workflows reducing manual reporting effort by **28%**.
- Collaborated cross-functionally to translate reporting requirements into scalable backend data solutions adopted within 2 weeks of deployment.

## PROJECTS

### SmartCart Recommender System & Experimentation Framework | Python, SQL

- Designed and executed **A/B experiments** with defined success metrics – achieving **120.9% CTR improvement** through data-driven iteration; built reusable experimentation framework with structured metric definitions for fast iteration across test cycles.
- Performed cohort and funnel analysis to understand behavioral shifts, long-term retention impact, and conversion patterns – surfaced actionable product insights from user-level behavioral data.

### Amazon Sales Performance Dashboard | Power BI, SQL

- Built end-to-end KPI dashboards tracking revenue growth, margin performance, and category-level contribution trends – designed for self-service use by non-technical business stakeholders.
- Identified underperforming product segments using variance and trend analysis; delivered interactive drill-down views supporting data-driven merchandising and inventory decisions.

### Operational Returns Intelligence Pipeline | Python, SQL, Databricks

- Engineered ETL pipeline integrating returns, inventory, and transaction data into a **consolidated SSOT data model** – reduced manual reporting effort by 30%, conducted root cause analysis on deviation drivers, and surfaced revenue leakage and process improvement opportunities for operations teams.

## CERTIFICATIONS & PUBLICATIONS

- **AZ-900** Microsoft Azure Fundamentals   **SQL Certification** – **HackerRank:** Advanced querying, window functions   **IEEE Xplore:** Cancer Detection with ML – peer-reviewed predictive modeling research
